

The First VoIP Control Panel Designed for Small & Medium HSP/ISP

BUSINESS BENEFITS

✓ **Advanced Digital Telephony Services**

VoIP delivers superior communication services at an affordable price without sacrificing voice quality.

✓ **Better Communication with Customers**

Your company can use call queues in order to allow customers to find out more about your services in a faster and more efficient way.

✓ **Branch Connections with no Recurring Costs**

You can connect your offices' telephony services using the Internet infrastructure without having to pay for dedicated physical lines. Due to packet switching technology, you can achieve any redundancy level you want without massive investments.

✓ **Better Communication between Employees**

Employees can leave voice messages, take part in conferences, use "Do Not Disturb" features, forward calls based on the status of their phone, reject calls from certain numbers etc.

✓ **Separated Environment for All Employees**

Every company employee can access the online configuration area, where he/she can setup his/her own phone extension. Basic phone terminal configuration can also be performed over the phone.

✓ **Call Screening**

You can protect your company from unwanted calls. Important calls can be automatically forwarded by 4PSA VoipNow.

✓ **Limited Abuse and Increased Service Quality**

Calls can be legally recorded by the company and stored on the server for a later review.

Dramatically Reduced Communication Fees

You can select the best cost for the desired destination. You are independent from telephony providers and there is no need to use a telecommunications company that will physically bring the wires to your office.

Best Industry Value

4PSA VoipNow provides a greater number of features than much more expensive systems on the market. It scales better than hardware PBX systems and can be upgraded very easily when new protocols or technologies emerge. This is a guarantee that you do not invest in obsolete technology.

Open Source Advantage

4PSA VoipNow relies on Open Source software with proven reliability and security history. This keeps the value high and the licensing costs low.

✓ Total Control

The system owner has full access to 4PSA VoipNow call history. The call history record is preserved and can be exported in Excel and CSV formats.

✓ Use IT Infrastructure without any Additional Investment

In the company offices you can use the existent IT infrastructure, without having to invest in new cabling.

✓ No Dedicated Personnel Required to Run the System

The system deployment can be performed by the IT staff, as well as maintenance and upgrades.

✓ Browser Platform Interface for Independent Administration

System management is performed over the network, in the browser. From admin to end users, all administration tasks are performed in the browser.

✓ Wide Range of Hardware Support

4PSA VoipNow is designed to work on x86 architecture servers. You can start with an entry level server and migrate to more powerful configurations when the need occurs.

✓ Wide Choice of Phone Terminals

You can select the right phones from a wide range of VoIP terminals. They plug directly into the Ethernet port and, if you do not have enough ports, you can share the port with the workstation.

✓ Software Phones Available

On Microsoft Windows, Linux, FreeBSD, Solaris, Mac, etc. there are many free and commercial software phones. They can be used with a regular headset/microphone without sacrificing voice quality.

✓ Ability to Expand the System in order to Match Company's Growth

The system can scale with the company's growth, small increment licenses being available.

✓ Benefit from Features Scalability

4PSA VoipNow is continuously being improved and new features are getting implemented. The software upgrade can be performed in several minutes and does not involve infrastructure or equipment changes.
