

4PSA VoipNow Reseller Partner

This document describes the 4PSA VoipNow Reseller Partner program.
For more information please contact channel@4psa.com.

Why to Resell 4PSA VoipNow

4PSA VoipNow is the first VoIP control panel for ISP / HSP. This means that the product is designed to be used by providers and their clients.

- **Data Centers** – Increase premium bandwidth requests and server sales by shipping your servers with 4PSA VoipNow. Unlike other services, VoIP traffic does not affect network reliability.
- **Internet Service Providers** – Even if you use a proprietary VoIP system, you still can offer 4PSA VoipNow to your customers. They must connect to your services and it is best to do this using a verified solution. Dumb and expensive routers can be replaced with a 4PSA VoipNow server.
- **PBX system integrators** – Since it is not the first time you worked with PBX systems, you will recognize the 4PSA VoipNow advantages over traditional solutions.
- **Solution providers** – Bringing 4PSA VoipNow to your solution portfolio will allow you to address a new range of communication services.

Why Work with Rack-Soft

- Five years of experience in designing and implementing server solutions
